

# Thorntree Primary School Calculation Policy- Addition

Year 1	Year 2	Year 3																								
<p><b><u>+ = signs and missing numbers</u></b>                      Children need to understand the concept of equality before using the '=' sign. Calculations should be written either side of the equality sign so that the sign is not just interpreted as 'the answer'.</p> <p><math>2 = 1 + 1</math>  <math>2 + 3 = 4 + 1</math></p> <p>Missing numbers need to be placed in all possible places.</p> <p><math>3 + 4 = \square</math>                      <math>\square = 3 + 4</math>  <math>3 + \square = 7</math>                        <math>7 = \square + 4</math></p> <p><b><u>Counting and Combining sets of Objects</u></b>                      Combining two sets of objects (aggregation) which will progress onto adding on to a set (augmentation)</p> <div style="text-align: center;">  </div> <p><b><u>Understanding of counting on with a numbertrack.</u></b>  <b><u>Understanding of counting on with a numberline</u></b>                      (supported by models and images).</p> <p><math>7 + 4</math></p> <div style="text-align: center;">  </div>	<p>Missing number problems e.g <math>14 + 5 = 10 + \square</math>    <math>32 + \square + \square = 100</math>    <math>35 = 1 + \square + 5</math></p> <p>It is valuable to use a range of representations (also see Y1). Continue to use numberlines to develop understanding of: <b><u>Counting on in tens and ones</u></b></p> <p><math>23 + 12 = 23 + 10 + 2</math>  <math>= 33 + 2</math>  <math>= 35</math></p> <div style="text-align: center;">  </div> <p><b><u>Partitioning and bridging through 10.</u></b>                      The steps in addition often bridge through a multiple of 10 e.g. Children should be able to partition the 7 to relate adding the 2 and then the 5.</p> <p><math>8 + 7 = 15</math></p> <div style="text-align: center;">  </div> <p><b><u>Adding 9 or 11 by adding 10 and adjusting by 1</u></b>                      e.g. Add 9 by adding 10 and adjusting by 1</p> <p><math>35 + 9 = 44</math></p> <div style="text-align: center;">  </div> <p><b><u>Towards a Written Method</u></b>  <b><u>Partitioning in different ways and recombine</u></b></p> <p><math>47 + 25</math>                      <math>60 + 12</math></p> <div style="display: flex; justify-content: space-around; align-items: center;"> <div style="text-align: center;">  </div> <div style="text-align: center;">  </div> </div> <p>Leading to exchanging:</p> <p><math>72</math></p> <div style="text-align: center;">  </div> <p><b><u>Expanded written method</u></b></p> <div style="text-align: center;"> <math display="block">\begin{array}{r} 40 + 7 \\ + 20 + 5 \\ \hline 60 + 12 = 72 \end{array}</math> </div>	<p>Missing number problems using a range of equations as in Year 1 and 2 but with appropriate, larger numbers.</p> <p><b><u>Partition into tens and ones</u></b>                      Partition both numbers and recombine.                      Count on by partitioning the second number only e.g.</p> <p><math>247 + 125 = 247 + 100 + 20 + 5</math>  <math>= 347 + 20 + 5</math>  <math>= 367 + 5</math>  <math>= 372</math></p> <p>Children need to be secure adding multiples of 100 and 10 to any three-digit number including those that are not multiples of 10.</p> <p><b><u>Towards a Written Method</u></b>                      Introduce expanded column addition modelled with place value counters (Dienes could be used for those who need a less abstract representation)</p> <div style="display: flex; align-items: center;"> <table border="1" style="border-collapse: collapse; text-align: center;"> <tr> <td style="width: 20px; height: 20px; background-color: blue;"></td> <td style="width: 20px; height: 20px; background-color: red;"></td> <td style="width: 20px; height: 20px; background-color: green;"></td> </tr> <tr> <td style="width: 20px; height: 20px; background-color: blue;"></td> <td style="width: 20px; height: 20px; background-color: red;"></td> <td style="width: 20px; height: 20px; background-color: green;"></td> </tr> </table> <div style="margin-left: 20px;"> <math>200 + 40 + 7</math>  <math>100 + 20 + 5</math>  <math>300 + 60 + 12 = 372</math> </div> <table border="1" style="border-collapse: collapse; text-align: center;"> <tr> <td style="width: 20px; height: 20px; background-color: blue;"></td> <td style="width: 20px; height: 20px; background-color: red;"></td> <td style="width: 20px; height: 20px; background-color: green;"></td> </tr> <tr> <td style="width: 20px; height: 20px; background-color: blue;"></td> <td style="width: 20px; height: 20px; background-color: red;"></td> <td style="width: 20px; height: 20px; background-color: green;"></td> </tr> </table> </div> <div style="text-align: right; margin-top: 10px;"> <math display="block">\begin{array}{r} 247 \\ +125 \\ \hline 12 \\ 60 \\ 300 \\ \hline 372 \end{array}</math> </div> <p>Leading to children understanding the exchange between tens and ones.</p> <div style="display: flex; align-items: center;"> <table border="1" style="border-collapse: collapse; text-align: center;"> <tr> <td style="width: 20px; height: 20px; background-color: blue;"></td> <td style="width: 20px; height: 20px; background-color: red;"></td> <td style="width: 20px; height: 20px; background-color: green;"></td> </tr> <tr> <td style="width: 20px; height: 20px; background-color: blue;"></td> <td style="width: 20px; height: 20px; background-color: red;"></td> <td style="width: 20px; height: 20px; background-color: green;"></td> </tr> </table> <div style="margin: 0 20px; font-size: 2em;">→</div> <table border="1" style="border-collapse: collapse; text-align: center;"> <tr> <td style="width: 20px; height: 20px; background-color: blue;"></td> <td style="width: 20px; height: 20px; background-color: red;"></td> <td style="width: 20px; height: 20px; background-color: green;"></td> </tr> <tr> <td style="width: 20px; height: 20px; background-color: blue;"></td> <td style="width: 20px; height: 20px; background-color: red;"></td> <td style="width: 20px; height: 20px; background-color: green;"></td> </tr> </table> </div> <p>Some children may begin to use a formal columnar algorithm, initially introduced alongside the expanded method. The formal method should be seen as a more streamlined version of the expanded method, not a new method.</p> <div style="text-align: right;"> <math display="block">\begin{array}{r} 247 \\ +125 \\ \hline 372 \\ 10 \end{array}</math> </div>																								

## Thorntree Primary School Calculation Policy- Addition

Year 4	Year 5	Year 6
<p>Missing number/digit problems:</p> <p><b>Mental methods</b> should continue to develop, supported by a range of models and images, including the number line. The bar model should continue to be used to help with problem solving.</p> <p><b>Written methods (progressing to 4-digits)</b></p> <p>Expanded column addition modelled with place value counters, progressing to calculations with 4-digit numbers.</p> <div style="display: flex; align-items: flex-start;"> <div style="margin-right: 20px;">  </div> <div> <math display="block">200 + 40 + 7</math> <math display="block">100 + 20 + 5</math> <math display="block">300 + 60 + 12 = 372</math> </div> </div> <div style="margin-top: 10px;"> <math display="block">\begin{array}{r} 247 \\ +125 \\ \hline 372 \end{array}</math> </div> <p><b>Compact written method</b></p> <p>Extend to numbers with at least four digits.</p> <div style="display: flex; align-items: flex-start;"> <div style="margin-right: 20px;">  </div> <div> <math display="block">\begin{array}{r} 2634 \\ +4517 \\ \hline 7151 \end{array}</math> </div> </div> <p><b>Children should be able to make the choice of reverting to expanded methods if experiencing any difficulty.</b></p> <p>Extend to up to two places of decimals (same number of decimals places) and adding several numbers (with different numbers of digits).</p> $\begin{array}{r} 72.8 \\ + 54.6 \\ \hline 127.4 \end{array}$	<p>Missing number/digit problems:</p> <p><b>Mental methods</b> should continue to develop, supported by a range of models and images, including the number line. The bar model should continue to be used to help with problem solving. Children should practise with increasingly large numbers to aid fluency e.g. <math>12462 + 2300 = 14762</math></p> <p><b>Written methods (progressing to more than 4-digits)</b></p> <p>As year 4, progressing when understanding of the expanded method is secure, children will move on to the formal columnar method for whole numbers and decimal numbers as an efficient written algorithm.</p> $\begin{array}{r} 172.83 \\ + 54.68 \\ \hline 227.51 \\ 1 \quad 1 \end{array}$ <p>Place value counters can be used alongside the columnar method to develop understanding of addition with decimal numbers.</p>	<p>Missing number/digit problems:</p> <p><b>Mental methods</b> should continue to develop, supported by a range of models and images, including the number line. The bar model should continue to be used to help with problem solving.</p> <p><b>Written methods</b></p> <p>As year 5, progressing to larger numbers, aiming for both conceptual understanding and procedural fluency with columnar method to be secured.</p> <p>Continue calculating with decimals, including those with different numbers of decimal places</p> <p><b>Problem Solving</b></p> <p>Teachers should ensure that pupils have the opportunity to apply their knowledge in a variety of contexts and problems (exploring cross curricular links) to deepen their understanding.</p>

# Thorntree Primary School Calculation Policy- Addition

Y1

## Statutory requirements

Pupils should be taught to:

- read, write and interpret mathematical statements involving addition (+), subtraction (-) and equals (=) signs
- represent and use number bonds and related subtraction facts within 20
- add and subtract one-digit and two-digit numbers to 20, including zero
- solve one-step problems that involve addition and subtraction, using concrete objects and pictorial representations, and missing number problems such as  $7 = \square - 9$ .

Y2

## Statutory requirements

Pupils should be taught to:

- solve problems with addition and subtraction:
  - using concrete objects and pictorial representations, including those involving numbers, quantities and measures
  - applying their increasing knowledge of mental and written methods
- recall and use addition and subtraction facts to 20 fluently, and derive and use related facts up to 100
- add and subtract numbers using concrete objects, pictorial representations, and mentally, including:
  - a two-digit number and ones
  - a two-digit number and tens
  - two two-digit numbers
  - adding three one-digit numbers
- show that addition of two numbers can be done in any order (commutative) and subtraction of one number from another cannot
- recognise and use the inverse relationship between addition and subtraction and use this to check calculations and solve missing number problems.

Y3

## Statutory requirements

Pupils should be taught to:

- add and subtract numbers mentally, including:
  - a three-digit number and ones
  - a three-digit number and tens
  - a three-digit number and hundreds
- add and subtract numbers with up to three digits, using formal written methods of columnar addition and subtraction
- estimate the answer to a calculation and use inverse operations to check answers
- solve problems, including missing number problems, using number facts, place value, and more complex addition and subtraction.

## Thorntree Primary School Calculation Policy- Addition

Y4

### Statutory requirements

Pupils should be taught to:

- add and subtract numbers with up to 4 digits using the formal written methods of columnar addition and subtraction where appropriate
- estimate and use inverse operations to check answers to a calculation
- solve addition and subtraction two-step problems in contexts, deciding which operations and methods to use and why.

Y5

### Statutory requirements

Pupils should be taught to:

- add and subtract whole numbers with more than 4 digits, including using formal written methods (columnar addition and subtraction)
- add and subtract numbers mentally with increasingly large numbers
- use rounding to check answers to calculations and determine, in the context of a problem, levels of accuracy
- solve addition and subtraction multi-step problems in contexts, deciding which operations and methods to use and why.

Y6

### Statutory requirements

Pupils should be taught to:

- multiply multi-digit numbers up to 4 digits by a two-digit whole number using the formal written method of long multiplication
- divide numbers up to 4 digits by a two-digit whole number using the formal written method of long division, and interpret remainders as whole number remainders, fractions, or by rounding, as appropriate for the context
- divide numbers up to 4 digits by a two-digit number using the formal written method of short division where appropriate, interpreting remainders according to the context
- perform mental calculations, including with mixed operations and large numbers
- identify common factors, common multiples and prime numbers
- use their knowledge of the order of operations to carry out calculations involving the four operations
- solve addition and subtraction multi-step problems in contexts, deciding which operations and methods to use and why

135

### Mathematics

### Statutory requirements

- solve problems involving addition, subtraction, multiplication and division
- use estimation to check answers to calculations and determine, in the context of a problem, an appropriate degree of accuracy.
